

SUPPLEMENTAL MATERIAL

Table S1. Summary of the medications taken by the study population (n=415)

Types of medication	N (%)
Antihypertensive	293 (70.6%)
Hypoglycemic	67 (16.1%)
Lipid-lowering	272 (65.5%)
Antiplatelet	262 (63.1%)
Anticoagulation	66 (15.9%)
Antiarrhythmic	56 (13.5%)

Figure S1. Representative flow cytometry plots are presented for IFN- γ and TNF- α secretion and for CD107a staining in the CD8⁺ T cell populations with or without stimulation with CMV pp65 overlapping peptides.
