

### S4 Fig. No effect of calophyllolide on proliferation and apoptosis of wound healing

**A**

**B**

(A) Quantification of BrdU positive cells showed no significant difference between CP and vehicle group at day 3 and day 7. (B) Quantification of TUNEL staining 24 h and 36 h post-wounding showed no significant difference between CP and vehicle group. n = 3 per group. Data are represented as mean  $\pm$  SD.
