Supplementary Table ST2. Classification metrics for each peptide/glycopeptide from IgG of which levels were significantly different for EOC in the discovery set. Accuracy was estimated using LOOCV. AUC, Fold change, Threshold, sensitivity and specificity were calculated using the whole discovery set. Bold font indicates that these glycopeptides were included in the best performing multiplexed classifier.

Supplementary Table ST5. Entry order and classification metrics for each peptide/glycopeptide from all three proteins of which levels were significantly different for EOC in the discovery set. Accuracy represents the accuracy of a multiplexed classifier including the glycopeptide indicated and all of the

glycopeptides above. Accuracies were estimated using LOOCV using set OC1. Bold font indicates that these glycopeptides were included in the best performing multiplexed classifier.
