

Description of Additional Supplementary Files

File Name: Supplementary Data 1

Description: Detailed demographic, molecular and clinical characteristics of individual patients with high-grade serous carcinomas with and without STIC lesions.

File Name: Supplementary Data 2.

Description: Copy number alterations identified as significantly altered in the GISTIC analysis compared between samples with and without STIC lesions by genomic region.

File Name: Supplementary Data 3.

Description: Copy number alterations identified as significantly altered in the GISTIC analysis compared between samples with and without STIC lesions by gene.

File Name: Supplementary Data 4.

Description: Class comparison of mRNA expression between samples with and without STIC lesions.

File Name: Supplementary Data 5.

Description: Class comparison of microRNA expression between samples with and without STIC lesions.

File Name: Supplementary Data 6.

Description: Differentially expressed genes among normal tissue subtypes.
