

Supplemental Figure 1. Flow diagram illustrating the step-wise exclusion of subjects based on exclusion and data quality criteria

Supplemental Figure 2. Cross-sectional Computed Tomography image from T11 to L5 illustrating “cut-off” regions (white arrows) limiting calculation of body and subcutaneous area and volume parameters but not impacting other morphomic parameter estimates

Supplemental Figure 3. Scatter and linear fit plots illustrate the relationship of key parameters and vancomycin clearance to generate a composite parameter predictive of vancomycin clearance
