3

4 Non-susceptible (intermediate or resistant) echinocandin results are highlighted; the “susceptible” breakpoint for ANF and CAS is ≤0.12µg/ml, and ≤0.06µg/ml  
 5 for MCF; there is no voriconazole breakpoint for *C. glabrata*; for FLC, MICs of ≤32µg/ml and ≥64µg/mL are considered susceptible dose-dependent and  
 6 resistant, respectively, for *C. glabrata*.

7 Caspofungin (CAS), Fluconazole (FLC), micafungin (MCF), anidulafungin (ANF), voriconazole (VRC).

8 All drugs were tested via Clinical Laboratory Standards Institute broth microdilution method within concentrations ranging from 0.015µg/ml to 16µg/ml, except  
 9 for fluconazole which ranged in concentration from 0.125µg/ml to 128µg/ml.

10

Caspofungin (CAS), Fluconazole (FLC), micafungin (MCF), anidulafungin (ANF), voriconazole (VRC).

Non-susceptible (intermediate or resistant) echinocandin MIC results are highlighted; *Candida krusei* is considered intrinsically resistant to FLC.

All drugs were tested via Clinical Laboratory Standards Institute broth microdilution method within concentrations ranging from 0.015 $\mu\text{g}/\text{mL}$  to 16 $\mu\text{g}/\text{ml}$ , except for fluconazole which ranged in concentration from 0.125 $\mu\text{g}/\text{ml}$  to 128 $\mu\text{g}/\text{ml}$ .

Highlighted values indicate a non-susceptible (intermediate or resistant) MIC; the “susceptible” breakpoint for ANF and CAS is  $\leq 0.12\mu\text{g}/\text{ml}$ , and  $\leq 0.06\mu\text{g}/\text{ml}$  for MCF; there are no VRC breakpoints for *C. glabrata*; for *Candida lusitaniae* there are no breakpoints for any antifungal agent; for *C. glabrata* a FLC MIC  $\leq 32\mu\text{g}/\text{ml}$  is considered susceptible dose-dependent and  $\geq 64\mu\text{g}/\text{ml}$  is considered resistant; *Candida krusei* is considered intrinsically resistant to FLC.

Caspofungin (CAS), Fluconazole (FLC), micafungin (MCF), anidulafungin (ANF), voriconazole (VRC).

Isolates listed as *Candida dubliniensis/albicans* were not further identified.

All drugs were tested via Clinical Laboratory Standards Institute broth microdilution method within concentrations ranging from  $0.015\mu\text{g}/\text{mL}$  to  $16\mu\text{g}/\text{ml}$ , except for fluconazole which ranged in concentration from  $0.125\mu\text{g}/\text{ml}$  to  $128\mu\text{g}/\text{ml}$ .
