

SUPPLEMENTARY FIG. S4. ROS inhibited adipogenesis without affecting cellular proliferation at 5 μ M. Cells were plated at equal density before AIM treatment with DMSO or ROS for 2 days (2D), followed by 10 days of AIM treatment alone (10DAIM), or AIM treatment with DMSO or ROS continuously for 12 days (12D). * $P < 0.01$ ($n = 3$). DMSO, dimethyl sulfoxide; ROS, roscovitine.
