

Supplementary information, Figure S9

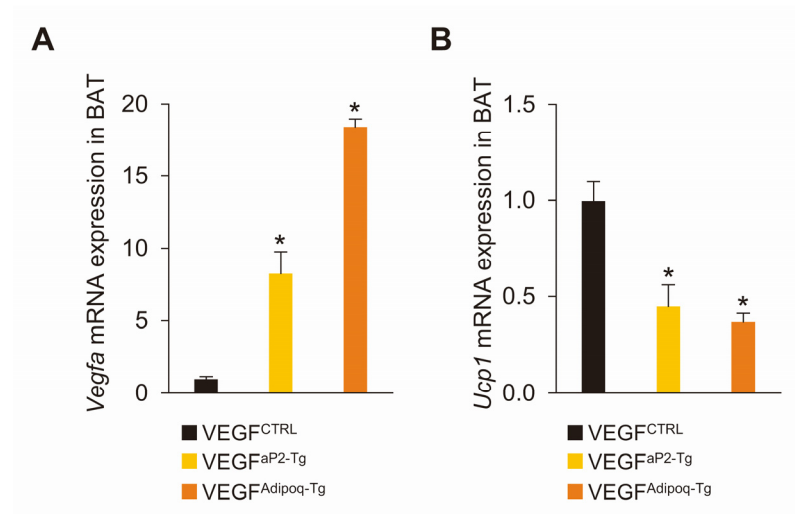

Figure S9 Intermittent VEGF overexpression in BAT did not increase thermogenic activity in BAT. (A) *Vegfa* mRNA expression in BAT of VEGF^{aP2-Tg} and VEGF^{Adipoq-Tg} mice showed successful VEGF overexpression in BAT. **(B)** *Ucp1* expression in BAT of VEGF^{aP2-Tg} and VEGF^{Adipoq-Tg} mice were significantly lower than control mice. Data are expressed as mean \pm SEM (VEGF^{CTRL}: n = 10; VEGF^{aP2-Tg}: n = 6; and VEGF^{Adipoq-Tg}: n = 5); one or two-way ANOVA with Student-Newman-Keuls *post-hoc* analysis; * P < 0.05 vs. VEGF^{CTRL}.
