Supplemental Figure 1: Identification of G6PC positive cells in K-G6pc^{-/-} kidneys.

A-B. Immunohistochemical analyses of G6PC in the kidneys of K-G6pc^{-/-} mice. Panel B corresponds to a higher magnification of the G6PC positive cells observed in panel A. The G6PC positive cells were identified as proximal convoluted tubules by the presence of brush border that reduces the luminal space of the tubule. G: glomeruli, DC: distal convoluted tubules, PC: proximal convoluted tubules.
