Appendix Figure S1

Appendix Figure G1. Expression levels of Atg18^{WT}-GFP and its mutant variants, resulting from the pRS316-based expression in *atg18Δ* and $\Delta\Delta\Delta$ cells. Cells were grown as in Fig. 2, lysed with TCA and glass beads, and analysed by SDS-PAGE and Western blotting against GFP and the vacuolar integral membrane protein Vam3, which served a loading control.

Appendix Figure S2. Cross-linking of Atg18 at various concentrations of protein. 3 μM to 0.4 μM of Atg18 were incubated with 1 mg/mL of liposomes containing 5% PI3P or PI($3,5\text{P}_2$). Cross-linking was performed as in Fig. 9.

5 ddYbXJl Table G1: Yeast strains used

5 ddYbXJI Table G2: PCR primers used

KO Primers are for amplification of the deletion cassette from the pUG6 plasmid (loxP-KanMX-LoxP) (Güldener *et al*, 1996). Atg18 F and R primers are for amplification of full-length Atg18 for ligation into the pEXP5-NT/TOPO vector (Invitrogen)
