

Supplemental Information 1

(a) Normalized Mps-1 mRNA levels derived from the TCGA database (mesothelioma, provisional), grouped according to tumor histology in epithelioid MM (E) and non-epithelioid MM (Non-E; which includes biphasic, sarcomatoid, and diffuse MM –as per TCGA classification). A statistically significant difference is observed (**, $P < 0.01$).

(b) Normalized Mps-1 mRNA levels, derived from the TCGA database, grouped according to the international TNM classification of staging (T1 to T4). No statistically significant difference is observed.
