

Fig. S1. The location of plant species (and number of individuals per species) in the microcosms.

Fig. S2. Rainfall simulator device.

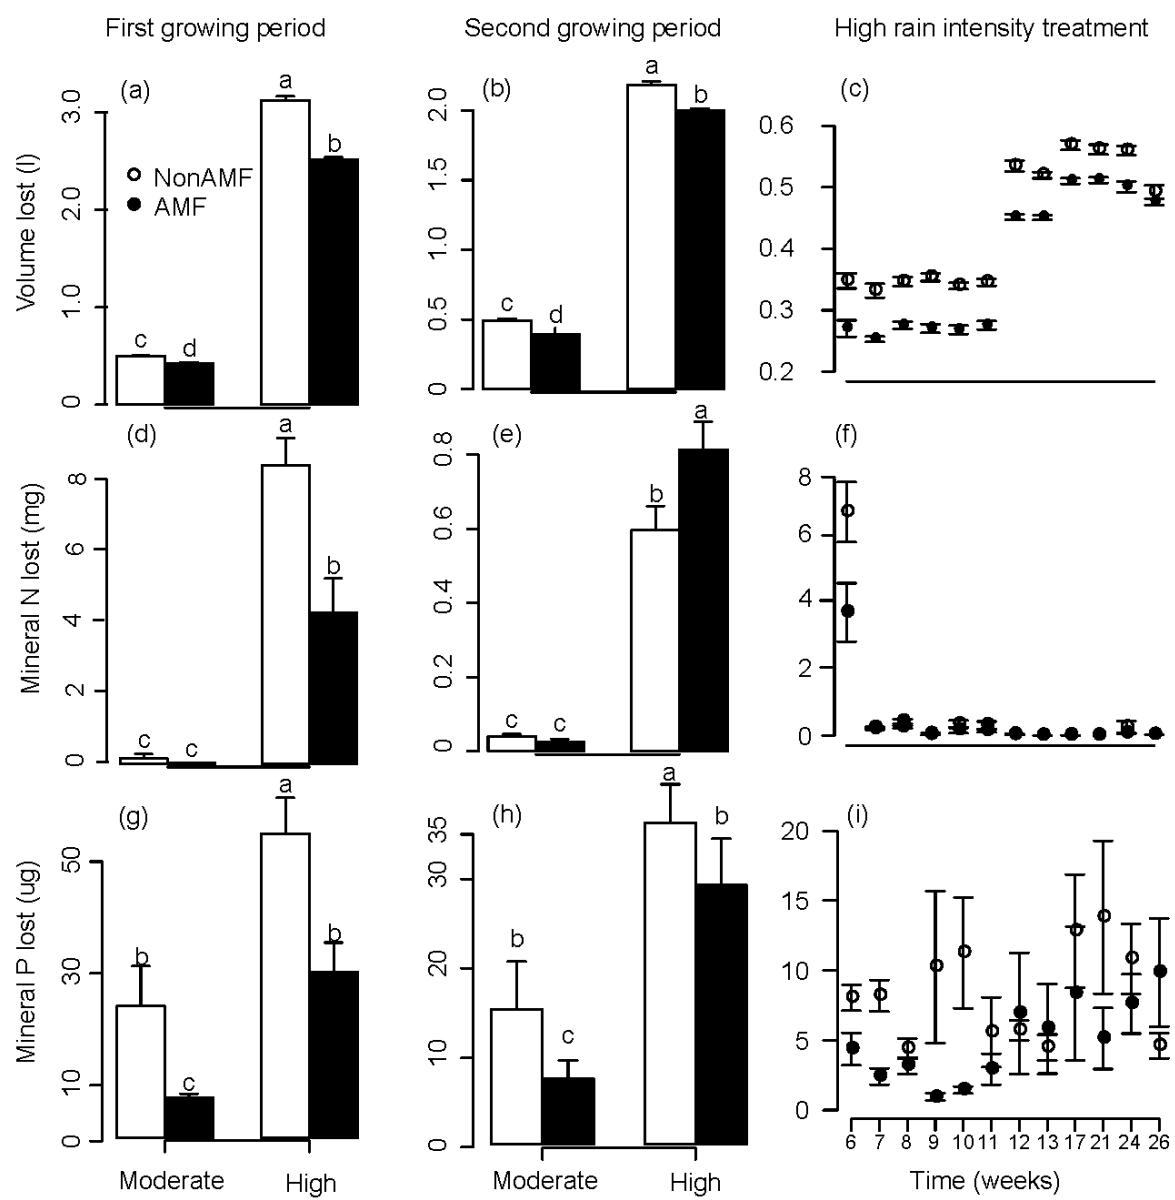

Fig. S3. Leachate volume (a, b, c), mineral N (d, e, f) and P losses (g, h, i) during the first growing period, the second growing period and at each simulated rainfall respectively, from microcosms subjected to moderate and high rain intensity treatments. Bars are means + 1SE, white bars and circles indicate absence of AM fungi (AMF) and dark bars indicate presence of AMF. Different letters indicate significance difference ($P < 0.05$) according to Tukey's post-hoc test.

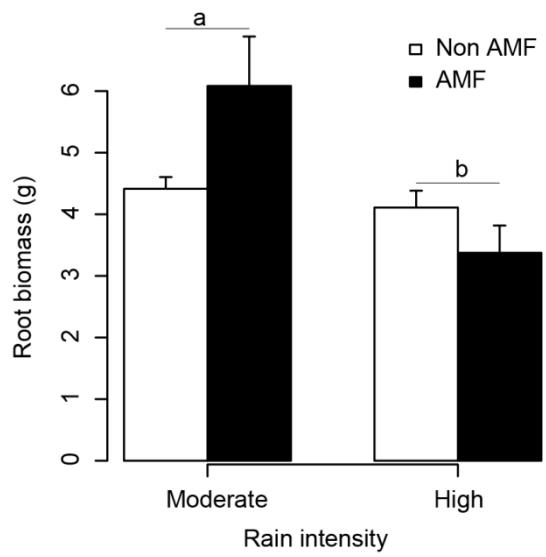

Fig S4. Mean root biomass and standard errors at the end of the experiment in microcosms with (black bars) or without AMF (white bars) and at Moderate or High rain intensity treatments. Different letters indicate significant difference between moderate and high rain intensity treatments according to Tukey's post-hoc test ($P < 0.05$).

Table S1. Adapted Hoagland nutrient solution. Each microcosms received 12 ml of this solution approximately each 2 weeks. The cumulative added solution was 168 ml which corresponds to 16.57 kg N/ha and 2.29 kg P/ha.

Hoagland Nutrient Solution	
Macronutrients	mmol/l
KNO ₃	6
CaCl ₂	4
Ca(NO ₃) ₂ .4H ₂ O	0.5
NH ₄ NO ₃	0.5
NH ₄ H ₂ PO ₄	1
MgSO ₄ .6H ₂ O	1
Micronutrients	
KCL, H ₃ BO ₃ , MnSO ₄ .4H ₂ O, ZnSO ₄ .4H ₂ O, CuSO ₄ .4H ₂ O, (NH ₄) ₆ Mo ₇ O ₂₄ .4H ₂ O	1
Fe(Na)EDTA, C ₁₀ H ₁₂ N ₂ O ₈ FeNa	1

Table S2. NH_4^+ -N and NO_3^- -N and PO_4^{3-} -P concentration in the leachate collected after each induced simulated rainfall (mean \pm 1 SE) from microcosms subjected to moderate and high rain intensity treatments, in presence and absence of AM fungi (AMF and Non AMF respectively).

Week	Rain	Moderate		High	
		Non AMF	AMF	Non AMF	AMF

Table S3. F-values of the lineal models used to test the effect of arbuscular mycorrhizal fungi (AMF) and rain intensity treatments (Rain) on total shoot biomass and plant functional groups (grasses, legumes and forbs) shoot biomass after the 1st and 2nd growing periods. Significant P values are in bold. Df: degrees of freedom.

	1st Growing Period			2nd Growing Period	
	Df	F value	P	F value	P
<i>Total shoot biomass</i>					
AMF	1	40.94	< 0.001	20.549	< 0.001
Rain	1	1.98	0.17	6.368	< 0.05
AMF x Rain	1	0.001	0.97	1.471	0.2331
Residuals	36				
<i>Grasses</i>					
AMF	1	82.32	< 0.001	240.32	< 0.001
Rain	1	3.95	0.057	1.92	0.17
AMF x Rain	1	0.03	0.87	5.29	0.03
Residuals	27				
<i>Legumes</i>					
AMF	1	260.16	< 0.001	775.53	< 0.001
Rain	1	3.06	0.09	1.5	0.23
AMF x Rain	1	0.18	0.68	0.07	0.79
Residuals	27				
<i>Forbs</i>					
AMF	1	172.25	< 0.001	404.2	< 0.001
Rain	1	0.59	0.45	1.52	0.22
AMF x Rain	1	2.88	0.1	9.48	< 0.01
Residuals	27
