

Table S8. Primer sequences, amplicon length and annealing temperature of primers targeting *cEper1* DE genes and two housekeeping genes (*gyrB* and *groEL*). Annealing temperatures were optimized with genomic DNA isolated from a culture of *E. suzannae* infected with *Cardinium hertigii* *cEper1*.

<i>Cardinium</i> locus tag ¹	Forward primer sequence (5' - 3')	Reverse primer sequence (5' - 3')	Expected length of amplicate [bp]	Annealing temperature [°C]
