

Supplemental Table ST8. Primer Table. The primers used to amplify the chloroplast genes *ndhF*, *rbcl*, and *matK/trnK* are listed, along with their sequence, location in the sorghum reference genome, amplicon length, and the reference for the source where we obtained the primer sequence.

Primer ID	Gene	Primer Name	Sequence (5' to 3')	Location in <i>S. bicolor</i> reference	Amplicon Length
DN001	<i>ndhF</i> (NADH dehydrogenase)	1F	ATGGAACATACATATCAATA	108161-108180	746
