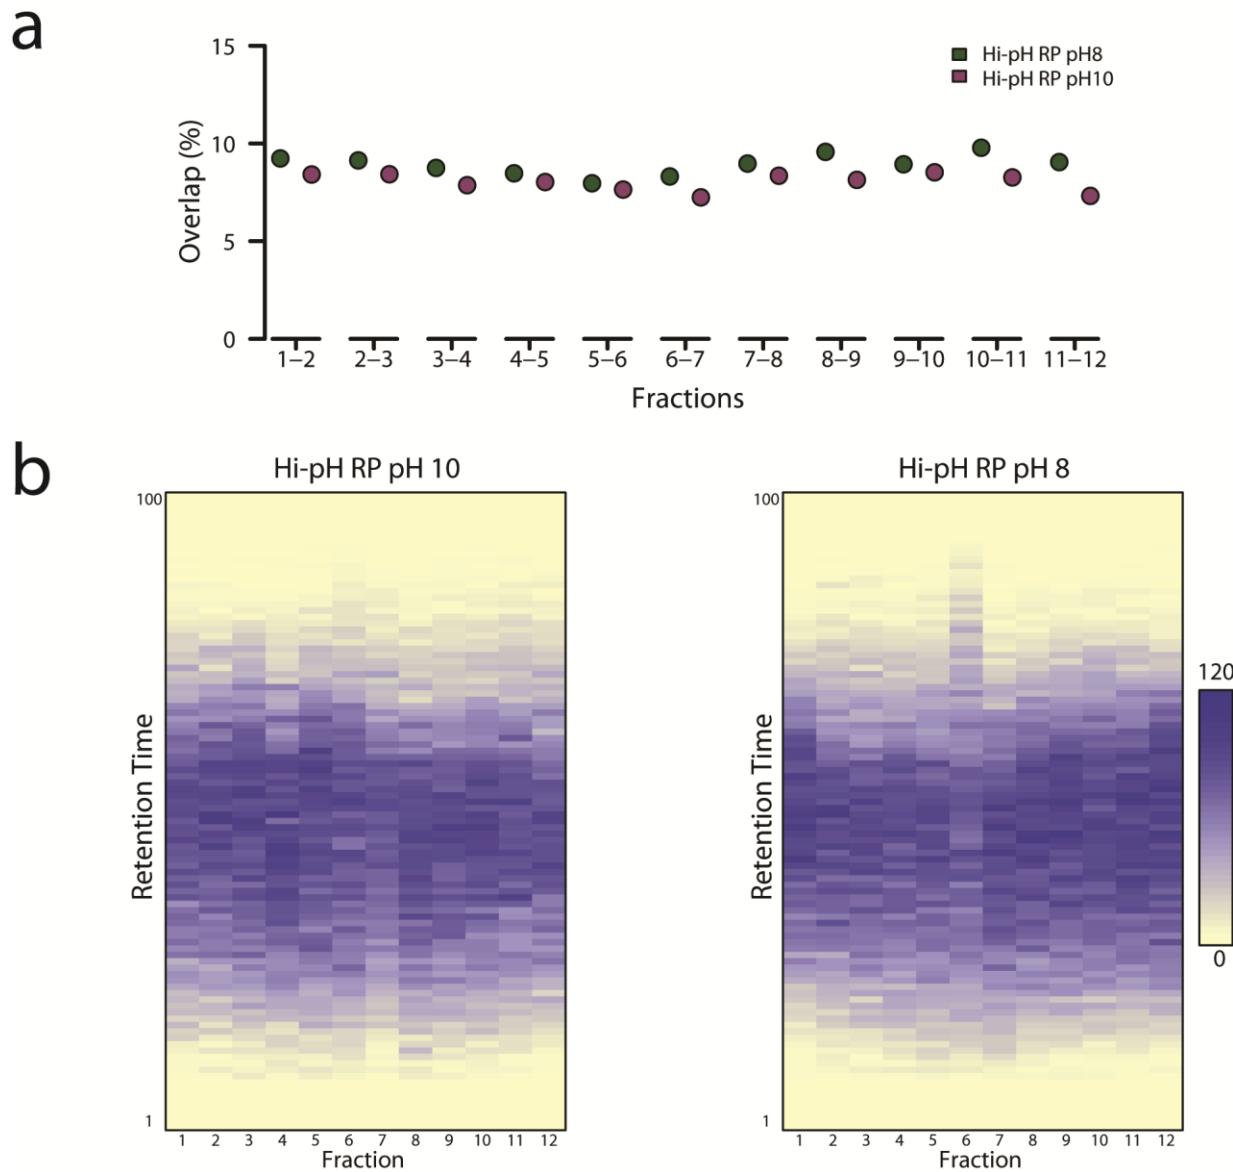

Fig. S2 pH 8 and pH 10 Hi-pH RP Fractional Overlap and Orthogonality (a) Overlap between each adjacent fraction is expressed as a percentage of the total peptides identified between the pair of fractions. (b) Heat maps of unique peptide retention time distributions plotted for each combined fraction in pH 8 and pH 10 Hi-pH RP analyses. Each peptide was allocated to 1 of 100 bins based on its average retention time between 1 and 138 minutes. The white-blue scale represents 0-120 peptides in each bin.
