

**S6 Caspase-10 cleavage induced by LA-12/cisplatin and TRAIL in PC-3 and LNCaP cells.** Cleavage of caspase-10 in PC-3 and LNCaP cells after pretreatment (24 h) with LA-12 (0.5/2.5  $\mu$ M) or cisplatin (10/5  $\mu$ M) and subsequent treatment (4 h) with TRAIL (5/20 ng/ml), respectively, detected by Western blotting.  $\beta$ -actin served as a loading control. Results are representative of at least three independent experiments.
