

Supplementary Fig. 1 Representative western blots showing overexpression of Δ Np73 α , p73 Δ Ex2/3 α and p73 Δ Ex2/3 β isoforms. **(a, b)** Ectopic expression of pcDNA3.1 or pcDNA3.1- Δ Np73 α in MCF7 and MDA-MB-231 cells. **(c)** Ectopic expression of pcDNA3.1 or pcDNA3.1-p73 Δ Ex2/3 α and p73 Δ Ex2/3 β in SK-MEL-28 cell lines. Cells were harvested 16 hours after transfection and lysed. Twenty μ g total protein lysate was fractionated by electrophoresis and transferred onto nitrocellulose membranes and blotted for p73-isoforms. β -actin was used as a loading control. Representative blots from three independent experiments.
