This supplementary material has been provided by the authors to give readers additional information about their work.

a)

Average Cyan Channel Intensity	% Staining in Image	Average Yellow Channel Intensity
28.78	1.05	1.68

b)

	van Bijsterveld	NEI Superior	NEI Inferior	NEI Lateral	NEI Total
Grader 1	3	2	2	1	5
Grader 2	2	1	2	0	3
Algorithm	2.79	1.53	1.86	1.71	5.24

eTable 1: Algorithm features and corresponding subjective gradings for Figure 3. a) Algorithm features calculated for the image shown in Figure 3. b) Manual and automated algorithm gradings for the image shown in Figure 3.

eTable2. Inter-grader Correlation and Reliability for Lissamine Green Staining Scores

	Spearman correlation coefficient (r_s)	Weighted Kappa*
van Bijsterveld Scale (N=35)	0.86	0.79
NEI scale (N=35)		
Top	0.84	0.85
Bottom	0.87	1.00
Lateral	0.93	0.95
Total	0.93	0.94

*Fleiss-Cohen weights

eTable 3. Correlation of Computer Algorithm Grading versus Subjective Gratings for Lissamine Green Staining

	Average of two graders*
van Bijsterveld Scale (N=35)	0.79
NEI scale (N=35)	
Top	0.60
Bottom	0.36
Lateral	0.54
Total	0.61

*Spearman correlation coefficients

eFigure 1. Plot of each feature’s contribution to the regression. Each bar represents the increase in prediction error when the feature is randomly permuted.

Scatter Plot of Rankings

eFigure 2: Plot of a comparison between the graders (G1 and G2) and the algorithm (Alg) rankings for placing each of the 35 images in rank order. A value of 1 indicates that the grader/algorithm rated the image as having the least staining, and a value of 35 indicate the image was rated as having the most staining.
