

## Identification of early ammonium nitrate-responsive genes in rice roots

Hsiu-Chun Yang<sup>†</sup>, Chia-Cheng Kan<sup>†</sup>, Tze-Huan Hung<sup>†</sup>, Ping-Han Hsieh<sup>†</sup>, Shi-Yun Wang, Wei-Yu Hsieh and Ming-Hsiun Hsieh\*

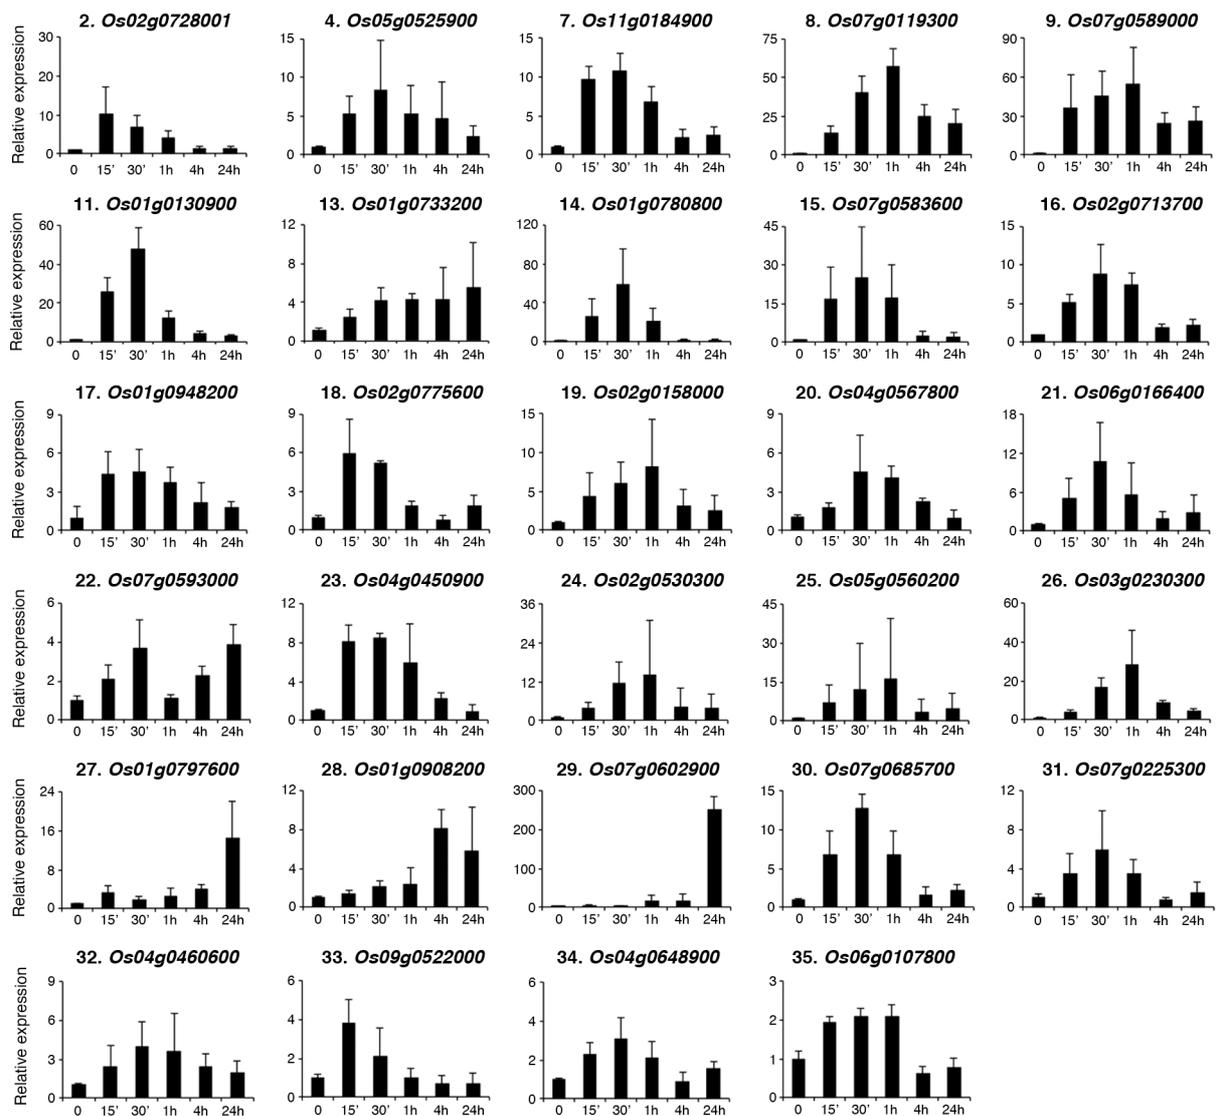

### Supplementary Information

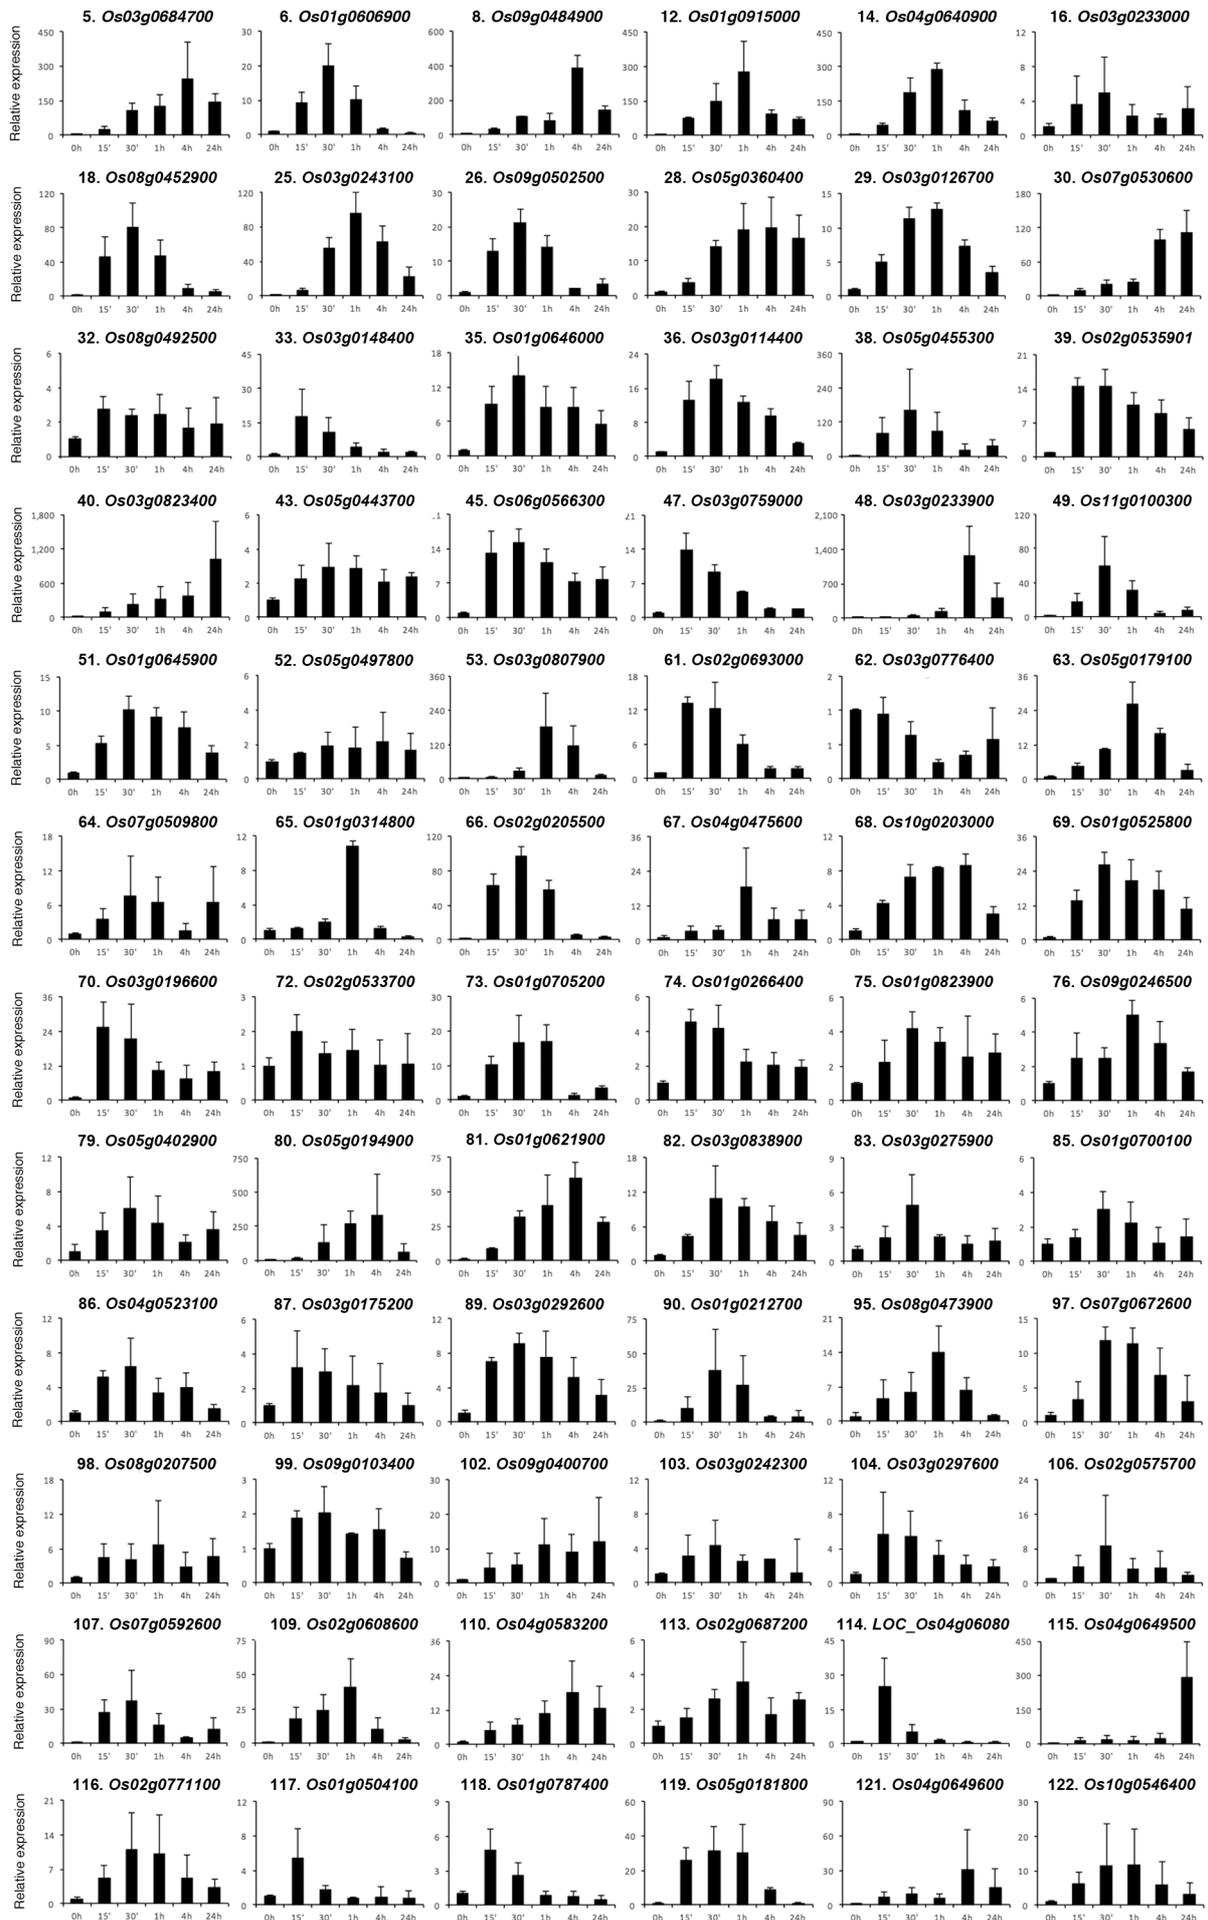

**Fig. S1** Amino acid contents in the rice roots during time course of ammonium nitrate treatment. **(A)** Contents of phenylalanine, lysine, valine, arginine, glycine, and threonine increased slightly in the roots of 17-day-old nitrogen-starved rice seedlings after 8–24 h of 1.43 mM ammonium nitrate treatment. The contents of histidine decreased slightly after 4–24 h of ammonium nitrate treatment. **(B)** Feeding of ammonium nitrate did not affect the contents of cysteine, tyrosine, tryptophan, isoleucine, leucine, proline and methionine in rice roots. Data are means  $\pm$  SD ( $n = 4$ ). Different letters indicate significant differences between treatments, tested by one-way ANOVA followed by Tukey's test ( $P < 0.05$ ).

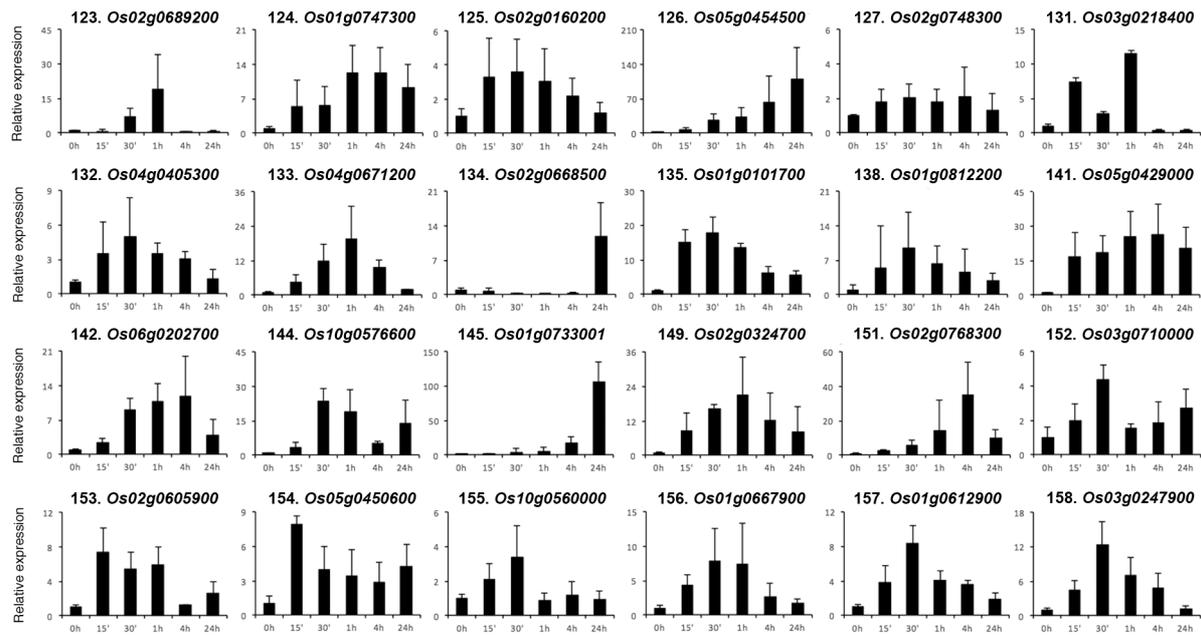

**Fig. S2** Gene ontology enrichment analysis of genes up-regulated by ammonium nitrate. The differentially expressed genes were analyzed by singular enrichment analysis using AgriGO. Significantly enriched GO categories in biological function are shown in yellow, orange and red (false discovery rate, FDR < 0.05).

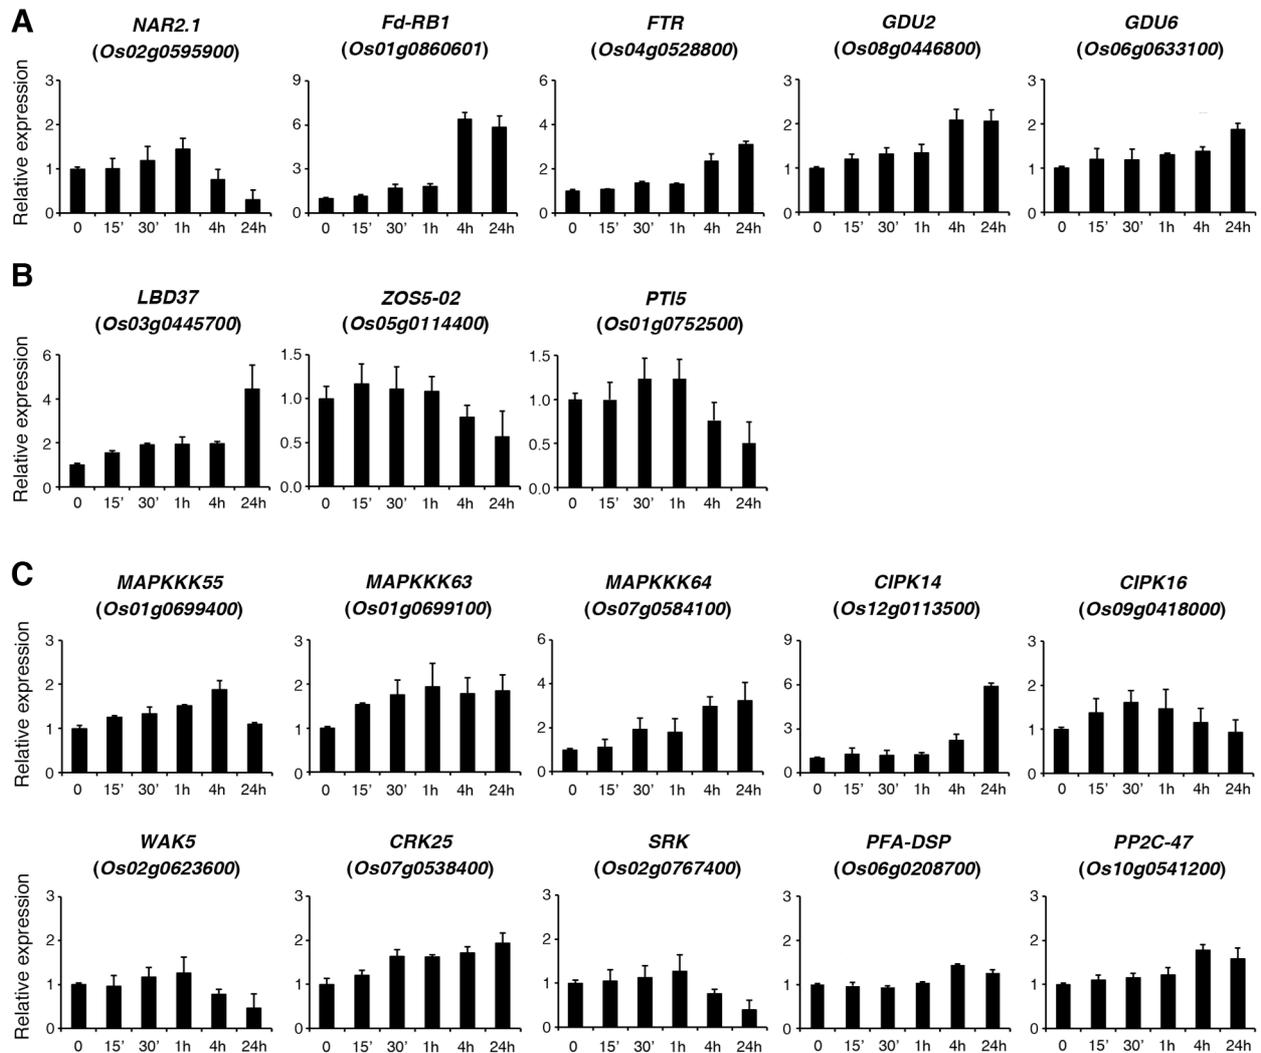

**Fig. S3** Quantitative RT-PCR analysis of genes encoding putative transcription factors/nuclear proteins that are rapidly induced by ammonium nitrate identified in this study. Total RNA extracted from roots of 17-day-old rice seedlings treated with ammonium nitrate for 0–24 h was used for qRT-PCR analysis. Relative expression indicates the fold-change of each gene as compared to that of control. The number of each gene corresponds to the number in Table 2. Results are shown as means  $\pm$  SD from three biological repeats.

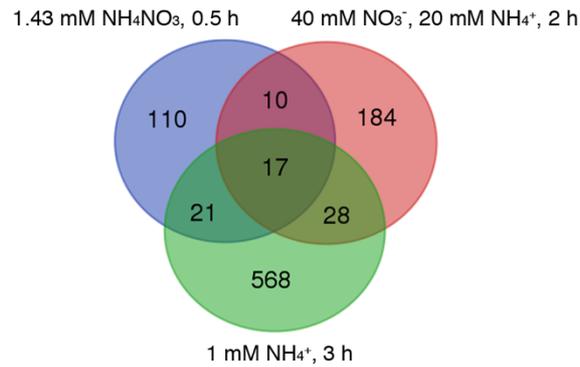

**Fig. S4** Quantitative RT-PCR analysis of early ammonium nitrate-responsive genes identified in this study. Total RNA extracted from roots of 17-day-old rice seedlings treated with 1.43 mM ammonium nitrate for 0–24 h was used for qRT-PCR analysis. Relative expression indicates the fold-change of each gene as compared to that of control. The number of each gene corresponds to the number in Table S1. Results are shown as means  $\pm$  SD from three biological repeats.

**Fig. S5** Quantitative RT-PCR analysis of early ammonium nitrate-responsive genes in rice shoots. Total RNA extracted from shoots of 17-day-old rice seedlings treated with 1.43 mM ammonium nitrate for 0–24 h was used for qRT-PCR analysis. Relative expression indicates the fold-change of each gene as compared to that of control. Two reference genes, *UBC3* (*Os02g0634800*) and *UBQ10* (*Os02g0161900*), were used to normalize the expression data. Results are shown as means  $\pm$  SD from three biological repeats.

**Fig. S6** Venn diagram of genes commonly induced by ammonium and ammonium nitrate. The numbers are up-regulated genes in rice roots identified by Chandran *et al.*<sup>25</sup>, Obertello *et al.*<sup>40</sup>, and this study. Obertello *et al.*<sup>40</sup> treated rice seedlings with 40 mM nitrate and 20 mM ammonium for 2 hours to identify differentially expressed genes. Chandran *et al.*<sup>25</sup> used 1 mM ammonium to treat rice seedlings for 3 hours to identify nitrogen-responsive genes.

**Table S1.** List of early ammonium nitrate-responsive genes in rice roots

No.	Locus ID		Fold change (+ NH <sub>4</sub> NO <sub>3</sub> /-N)	Gene description
1	Os02g0770800	LOC_Os02g53130	65.8	Nitrate reductase [NAD(P)H]

---

Total RNA extracted from roots of nitrogen-starved 17-day-old rice seedlings (-N) or treated with 1.43 mM ammonium nitrate for 30 min was used for microarray analysis. Quantitative RT-PCR analysis was used to verify the expression of genes identified in the microarray data. The expression of genes listed here was up- or down-regulated by ammonium nitrate (1.43 mM, 30 min) for more than 2-fold in the qRT-PCR analysis.

---

**Table S2.** KEGG pathway enrichment analysis of genes (17 genes with KO) rapidly induced by ammonium nitrate (1.43 mM, 30 min) in rice roots

<b>Pathway (ID)</b>	<b>Gene Identifier</b>	<b>Gene Description</b>
Photosynthesis (ko00195)	Os01g0860601	Ferredoxin, root R-B1
	Os03g0784700	Ferredoxin--NADP reductase (FNR)
	Os05g0443500	Ferredoxin VI, chloroplast precursor
Nitrogen metabolism (ko00910)	Os02g0770800	Nitrate reductase
	Os01g0357100	Nitrite reductase
Sulfur metabolism (ko00920)	Os07g0509800	Adenylyl-sulfate reductase
	Os03g0196600	Serine O-acetyltransferase
Carbon metabolism (ko01200)	Os07g0406300	Glucose-6-phosphate 1-dehydrogenase
	Os11g0484500	6-Phosphogluconate dehydrogenase
	Os03g0196600	Serine O-acetyltransferase
	Os05g0429000	Glycine hydroxymethyltransferase
Pentose phosphate pathway (ko00030)	Os07g0406300	Glucose-6-phosphate 1-dehydrogenase
	Os11g0484500	6-Phosphogluconate dehydrogenase
Glutathione metabolism (ko00480)	Os07g0406300	Glucose-6-phosphate 1-dehydrogenase
	Os11g0484500	6-Phosphogluconate dehydrogenase
C5-branched dibasic acid metabolism (ko00660)	Os02g0608600	ACT domain containing protein ACR8, similar to acetolactate synthase I/III small subunit

The 158 genes identified in this study were compared with the genes reported by Chandran *et al.*<sup>25</sup> and Obertello *et al.*<sup>40</sup>. \*Fold change indicates the ratio of +NH<sub>4</sub>NO<sub>3</sub>/-N derived from this study.

**Table S9.** Sequences of primers used for quantitative RT-PCR analysis
