
This document includes detailed tables of the impact of selection bias effect η and linear time trend effect θ separately and jointly on the type I error probability for different randomization procedures.

Table 1: Impact of selection bias effect $\eta = 0.09$ and linear time trend effect $\theta = 0.26$ with $\sigma = 0.73$ on probability of type I error for different randomization procedures

Randomization Procedure [RP]	Type I Error Probability [mean]	$P_{RP}(\omega \leq 0.05)$
CR	0.050	0.53
RAR	0.052	0.34
PBR(2)	0.105	0.00
