

Supplementary information, Figure S3 Knockdown of *Twa1* reduces the protein levels of endogenous *Twa1* in HEK-293 cells. The cells transfected with lentivirus-based shRNAs targeting different regions of *Twa1* mRNA (sh-*Twa1* and sh-*Twa1*-2) or control shRNA (sh-ctr) were subjected to western blotting with the indicated antibodies (full immunoblot). GAPDH was used as a loading control.
