

Figure S5

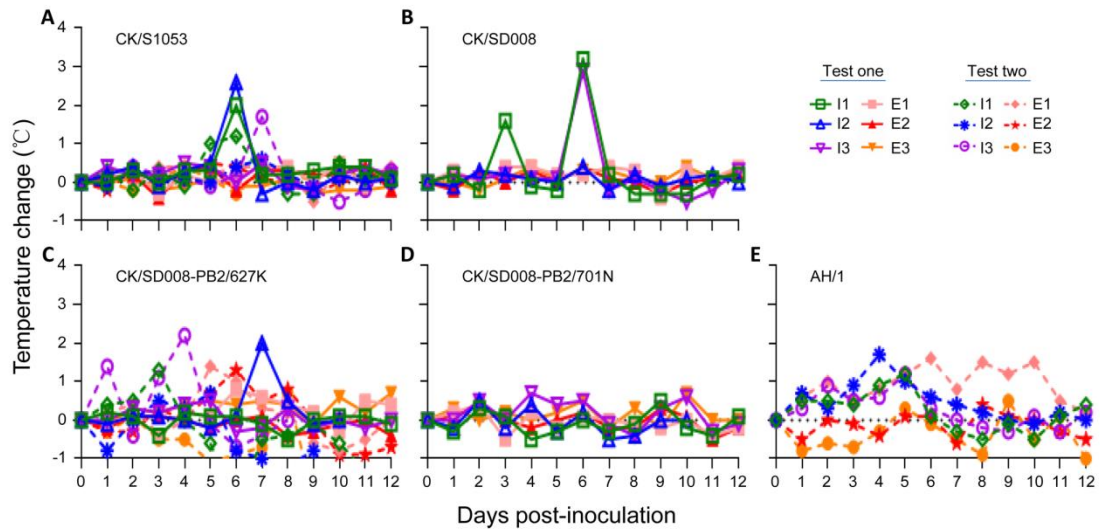

Figure S5. Body temperature of ferrets after infection with or exposure to H7N9 viruses. Change in body temperature in ferrets after infection with (I1-I3) or exposure to (E1-E3) CK/S1053 virus (A), CK/SD008 virus (B), CK/SD008-PB2/627K virus (C), CK/SD008-PB2/701N virus (D), and AH/1 virus (E). Changes were calculated by subtracting the mean temperature 3 days before infection from the temperature recorded on the indicated day.
