(++) Values higher than two times the cut-off (Grey). (+) Values higher than the cut-off. (-)

Values lower than the cut-off (Red). To calculate the cut-off, the following equation was used:

$\text{cut-off} = \bar{x}_{\text{neg}} + (3\sigma_{\text{neg}})$. In this equation \bar{x}_{neg} is the mean and σ_{neg} the standard deviation of the negative control. As a negative control, the ELISA was performed in the absence of anti-*Campylobacter* nanobodies.

Results of the ELISA performed to measure the binding of anti-*Campylobacter* nanobodies to different *Campylobacter* isolates.
