Supplemental Table 1.

A table of uncorrected correlations between mean amygdala activation during each

condition (Affect Labeling, Gender Labeling, and Observing) and clinical variables (age

of depression onset, number of previous depressive episodes, and current depressive

episode length) at baseline.

	Age of Depression Onset (*n* = 74)	Number of Previous Depressive Episodes (*n* = 74)	Current Depressive Episode Duration (*n* = 76)
Affect Labeling Amygdala Activation	-.287, *p* = .013	-.024, *p* = .842	-.012, *p* = .918
Gender Labeling Amygdala Activation	-.168, *p* = .154	.129, *p* = .273	-.173, *p* = .135
Observing Amygdala Activation	-.237, *p* = .042	-.157, *p* = .181	-.134, *p* = .249
