

Fig S5: Graphical representation of sub consensus heterogeneity using H Index for all viruses with viral reads >25,000. All Turkey viruses grouped as follows: pre-host shift (triangle), early phase (circle), late phase (square), and non-host shift from Turkey (diamond). Trend lines for early and late phase viruses indicated by dashed line. Fox samples (black), dog samples (grey). Unpaired t-test $p < 0.001^{***}$, $p < 0.05^{**}$.
