

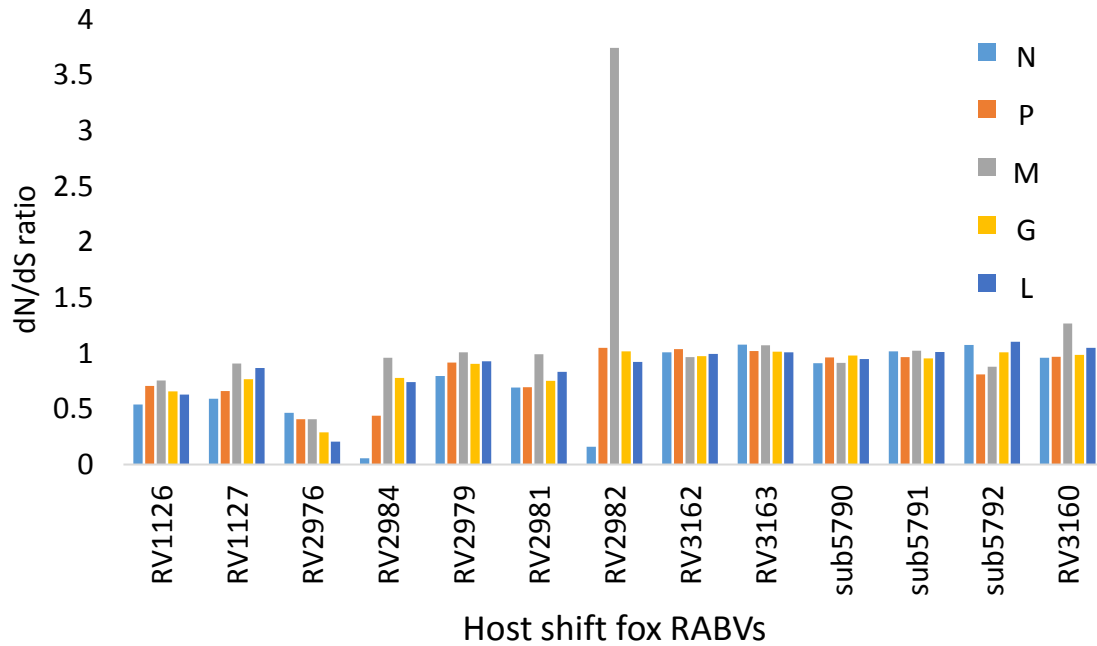

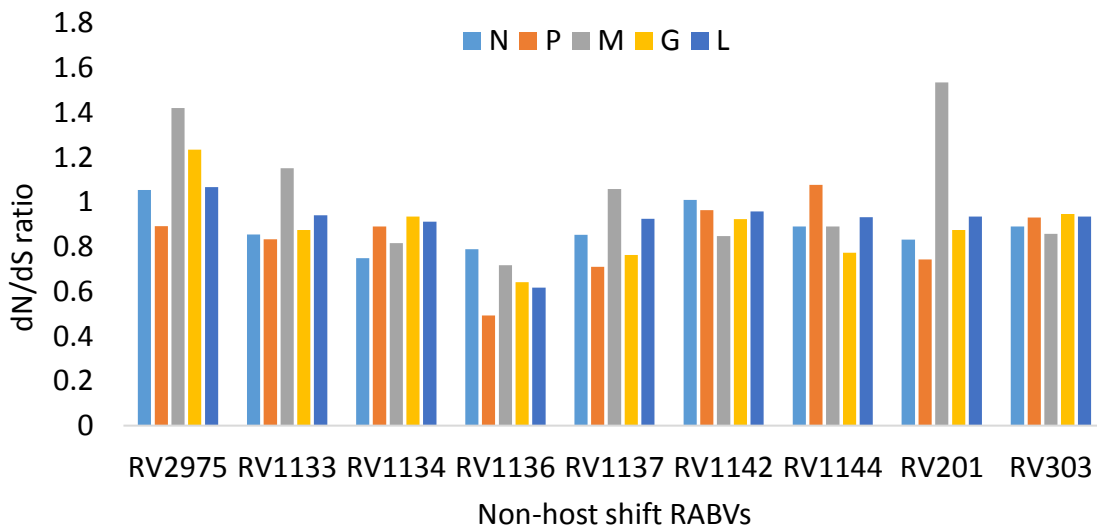

Fig S6: dN/dS ratios of sub-viral population across all viruses ordered by collection date, with viral reads >25,000. (A) Individual genes from host shift viruses, (B) individual genes from non-host shift viruses and pre-host shift virus RV2975D Izmir. (C) Average dN/dS ratios of host shift viruses, plotted against time, across all genes, pre- host shift virus RV2975D Izmir (triangle), early phase viruses (circle), late phase viruses (square). Fox samples (black), dog samples (grey).

A.

B.
