

By up-regulating μ - and δ -opioid receptors, neuron-restrictive silencer factor knockdown promotes neurological recovery after ischemia

SUPPLEMENTARY MATERIALS

Supplementary Figure 1: Identification of recombinant plasmids after enzyme digestion using qRT-PCR (A) and 239T cells with CPE (B). qRT-PCR, quantitative real-time polymerase chain reaction; CPE, cytopathic effect; M, marker; 1, 2 and 3 are three positive clones.
