

INSTRUMENT FOR DATA COLLECTION OF THE ENCARCERATED'S WOMEN MEDICAL RECORDS

County:

Date:

Prison unit:

Women's order number:

I: Characterization of the internal		
01- Age _____ years old.		
II: Characterization of health care related to the Control of Cervical Cancer		
02–The oncotic colpocytology examination was collected after the arrival of the woman in the prison unit: a. () Yes b. () No c. () No record information If yes, when (year)		
03–Place where the collection was made after the arrival of the woman in the Prison unit: a. () Prison unit b. () No record information c. () Others:		
04–Record of the results of the oncotic colpocytology examination: a. () Yes b. () No c. () No record information		
05–Result of oncotic colpocytology examination - Within the limits of normality in the material examined: a. () Yes b. () No c. () No record information		
06 - According to the alteration presented in the result of the oncotic colpocytology examination, which was performed:		
1	Atypical squamous cells of undetermined significance, possibly non-neoplastic (ACU-US)	a. () Repeats the cytopathological examination in 06 months. b. () Repeats the cytopathological examination in 12 months. c. () Forwards to other levels of health care. d. () No record information e. () Others:_____
2	Células escamosas atípicas de significado indeterminado, quando não se pode excluir lesão intraepitelial de alto grau (ASC-H)	a. () Repeats the cytopathological examination in 06 months. b. () Repeats the cytopathological examination in 12 months. c. () Forwards to other levels of health care. d. () No record information e. () Others:_____
3	Atypical glandular cells of undetermined significance, possibly non-neoplastic or	a. () Repeats the cytopathological examination in 06 months. b. () Repeats the cytopathological examination

	when high-grade intraepithelial lesion cannot be excluded (AGS).	in 12 months. c. () Forwards to other levels of health care. d. () No record information e. () Others:_____
4	Atypical cells of indefinite origin	a. () Repeats the cytopathological examination in 06 months. b. () Repeats the cytopathological examination in 12 months. c. () Forwards to other levels of health care. d. () No record information e. () Others:_____
5	Low-grade squamous intraepithelial lesion (LSIL)	a. () Repeats the cytopathological examination in 06 months. b. () Repeats the cytopathological examination in 12 months. c. () Forwards to other levels of health care. d. () No record information e. () Others:_____
6	High-grade intraepithelial lesion (HSIL)	a. () Repeats the cytopathological examination in 06 months. b. () Repeats the cytopathological examination in 12 months. c. () Forwards to other levels of health care. d. () No record information e. () Others:_____
7	High-grade intraepithelial lesion not being able to exclude microinvasion or invasive squamous cell carcinoma or clinical suspicion of invasion.	a. () Repeats the cytopathological examination in 06 months. b. () Repeats the cytopathological examination in 12 months. c. () Forwards to other levels of health care. d. () No record information e. () Others:_____
8	Adenocarcinoma in situ (AIS) and invasive	a. () Repeats the cytopathological examination in 06 months. b. () Repeats the cytopathological examination in 12 months. c. () Forwards to other levels of health care. d. () No record information e. () Others:_____
07–Treatment for the woman who presented the result of the altered colposcopic examination: a. () Yes b. () No c. () No record information		
08–There was a referral from the woman: a. () Yes b. () No c. () No record information		
09–If the woman was referred to what level of attention: a. () Primary care level		

b. () Secondary care level c. () Tertiary care level
10–If the woman was referred with a result of the altered colpocytological examination to another health care service, there is a record of whether the team received information about the behaviors adopted for the treatment of women: a. () Yes b. () No c. () No record information
11–If the answer to the previous question is yes, what were the types of conduct adopted: a. () Colposcopy b. () Biopsy c. () Conization d. () Exercise of Transformation Zone (EZT) e. () Hysterectomy f. () Forwarding to the tertiary unit g. () Others
12 - Treatment: a. () It was finalized b. () Not finalized c. () It is treating d. () No record information
