

Table S2. Antibiotic susceptibility profile of *S. Typhimurium* strains lacking PBP3 or PBP3_{SAL} (*)

Antibiotic (†)	Strain		
	WT	Δ <i>ftsI-1</i>	Δ PBP3 _{SAL}
Ampicillin	0.75	1	1
Aztreonam	0.094	0.75	0.094
Cefalotin	4	8	8
Cefepime	0.19	0.19	0.19
Cefoxitin	2	6	4
Ceftazidime	0.75	0.125	0.38
Cefuroxime	8	48	12
Imipenem	0.19	0.125	0.125
Meropenem	0.023	0.016	0.032
Piperacillin	1.5	3	1.5
Kanamycin	4	6	4
Ciprofloxacin	0.023	0.064	0.032

(*) Indicated are values of minimal inhibitory concentration (MIC) ($\mu\text{g ml}^{-1}$) of a representative experiment from a total of two independent E-test assays with essentially identical results.

(†) Kanamycin and ciprofloxacin were used as control non-beta-lactam antibiotics
