

Figure S2. Genetic differentiation (F_{ST}) for each of the 8,660 protein-coding genes between wild and cultivated ginseng. F_{ST} values for each gene between wild and all cultivated ginseng accessions (**A**), wild and SCG (**B**), wild and NCG (**C**) and SCG and NCG (**D**), respectively. X- and y-axis are the F_{ST} value of each gene and total number of genes within each unit. Negative values indicate no genetic differentiation at these genes.
