

Pseudogenes of annexin A2, novel prognosis biomarkers for diffuse gliomas

SUPPLEMENTARY MATERIALS

Supplementary Figure 1: ANXA2 and annexin A2 pseudogenes expression in glioma samples of the GSE43378 dataset. Total 50 cases of glioma samples (11 cases of A, 7 cases of OD, 32 cases of GBM).

Supplementary Table 2: Clinical and molecular pathology characteristics of diffuse glioma patients

Clinical characteristics	Specimens
Number of patients (n)	99
Oligodendroglioma	13
Oligoastrocytoma	10
Astrocytoma	50
Glioblastoma with grade IV	26
Gender, female / male	37 / 62
Age at diagnosis, year	45.34±1.543
KPS score, >80 / ≤80	83 / 16

Abbreviations: KPS, karnofsky performance score; +: positive, -: negative.

Supplementary Table 1: Probe sets represent on Affymetrix HG-U133 Plus 2.0 arrays.
