

Supplemental Figure 1. Prevention protocol: western blot analysis for collagen IV and F4/80.

Western blot analysis for collagen IV α 1 chain (*Panel A*) and F4/80 (*Panel B*) protein levels in representative animals and relative band densitometry analysis in untreated and FL-926-16 (FL)-treated *db/m* control (Ctrl) and *db/db* diabetic (Diab) mice (mean \pm SD; n=5 per group). The Y axis label "Relative level" indicates fold of mean value of Ctr (*db/m* control) mice. Post-hoc multiple comparison: *p<0.05 vs Ctrl, †p<0.05 vs Diab.
