

Figure S4. *Parascaris* RNA expression during development. The heatmap shows the expression of 9,102 genes (with average rpk ≥ 5 or max rpk ≥ 20) across 5 different developmental stages in *Parascaris*. Testis, male reproductive system; ovary, female reproductive system; embryo, mixed embryos from 1-cell to larvae L1; intestine, male intestine; and male carcass which includes muscle, hypodermis, pharynx, and neurons after the testis, spermatids, and intestine were removed.
