

**S2 Fig.** A restriction map of 1.7 kb fragment of metagenome clone, M2-67-11. Putative ORFs shown on the restriction map were inferred from sequence analysis. The names of the putative ORFs are as follows: orf1, Glyoxalase/bleomycin resistance protein; orf2, Nickel dependent hydrogenase; orf3, oxidoreductase; orf4, hypothetical protein. The restriction sites of SbfI, SacI, PstI, and Aval are indicated on the map.
