

Supplementary Figure S1

(A) Conditional ATG8 knockdown line (ATG8-TetR) generated by replacement of the endogenous 3' UTR in the NF54^{Cas9+T7 Polymerase} strain with the anhydrotetracycline-regulated aptamer sequence and the TetR-DOZI cassette. (B) Anti-myc western blot on the ATG8-TetR lysate. Myc-BirA-expressing strain was used as a positive control for the anti-myc antibody. Anti-ATG8 blot is shown for comparison. Aldolase, loading control. Asterisk indicates unspecific bands.
