

Supplementary Figure S3

(A) Representative live images of ACP_L-GFP expressing schizont stage parasites in the first cycle of ATG8 knockdown, i.e. approx. 32 hrs after aTC removal. Scale bar 5 μm. (B) Separate biological replicates of the experiment shown in Figure 3B. Thirteen and 43 parasites for replicate #1, and 34 and 55 parasites for replicate 2 were counted for +aTC and -aTC condition, respectively.
