

Supplementary Figure 1. Tissue biodistribution of cel-miR-39 mimic after jugular vein infusion with *in vivo*-jetPEI or invivolectamine 3.0 vehicle. Raw PCR quantification cycles (Cq) of cel-miR-39 (circle) and the internal reference control, RNU6-2 (square). Data are presented as the relative level above the predefined PCR detection cutoff ($\Delta Cq = 35 - Cq$). Individual biological replicates are shown (n=3 rats/timepoint/vehicle). Horizontal lines denote mean levels.
