

Fig. S1. PPK promotes the intramacrophage growth and survival of LVS. Growth and survival of wild-type LVS cells (LVS) and cells of the LVS Δppk mutant strain (LVS Δppk) in J774 cells. J774 cells were infected with cells of the indicated strains at a multiplicity of infection of 5-10. 24 hours post-infection cells were lysed and bacteria were plated for enumeration. CFU stands for colony forming units.
