

Table S4: Increase in model fit gained from each respective variable in Cox proportional hazards model after adjusting for age, gender, and race.

Variable	Gini mean difference of hazards (95% CI)
Surprise Question trinary	0.94 (0.38, 2.20)
Charlson Comorbidity Index	0.75 (0.30, 1.55)
Surprise Question binary	0.61 (0.20, 1.29)
Albumin	0.57 (0.15, 1.28)
Heart failure	0.55 (0.16, 1.20)
Hemoglobin	0.41 (0.05, 1.08)
Diabetes	0.27 (0.02, 1.42)
Arrhythmia	0.23 (0.01, 0.69)
Dementia	0.15 (0.01, 0.46)
