

Supplementary table: Hepatitis B virus (HBV) infection seroprevalence estimates by country for hepatitis B mathematical model

Country	Hepatitis B virus serological markers included in Goldstein model (%) ^a			
	HBsAg among WCBA	HBeAg among WCBA	Anti-HBc at 5 years old	Anti-HBc at ≥ 30 years old
Bangladesh	7.50 ^b	16.70 ^b	0.76 ^b	52.50 ^b
Bhutan	3.59 [1]	20.00 [1]	10.00 [1]	45.00 [1]
DPR Korea	11.83 [1]	30.00 [1]	25.00 [1]	77.50 [1]
India	3.59 [1]	20.00 [1]	10.00 [1]	45.00 [1]
Indonesia	2.20 [2, 3, 4]	23.55 [2, 3]	25.00 [1]	77.50 [1]
Maldives	3.59 [1]	20.00 [1]	10.00 [1]	45.00 [1]
Myanmar	5.50 ^b	32.70 [5]	25.00 [1]	77.50 [1]
Nepal	1.00 [6]	20.00 [1]	10.00 [1]	45.00 [1]
Sri Lanka	1.75 ^b [7]	20.00 [1]	25.00 [1]	77.50 [1]
Thailand	4.50 [8]	10.70 [9]	1.40 [8]	37.10 [8]
Timor-Leste	2.80 [10]	20.00 [1]	25.00 [1]	77.50 [1]

HBsAg: hepatitis B surface antigen; HBeAg: hepatitis B e antigen; anti-HBc: anti hepatitis B core antibody; WCBA: women of child bearing age

^a When more than one study was available, median seroprevalence was calculated unless country had a nationally representative serosurvey in which case the most recent national serosurvey was used

^b Unpublished report
