

## Tracking Hematopoietic Precursor Division *ex vivo* in Real Time

Running title: Tracking Division of Hematopoietic Precursors in Culture

Yuchen Wang, Hong Tian, Wenzhi Cai, Zhaorui Lian, Dheeraj Bhavanasi, Chao Wu, Tomohiko Sato, Mineo Kurokawa, De-Pei Wu, Li Fu, Hong Wang, Hao Shen, Dong Liang, Jian Huang

### Figure S1. OP9 stromal cells contribute to the fate decision of precursors *ex vivo*

(a) The frequency of symmetric self-renewal, symmetric differentiation and asymmetric division of GFP+ precursors from wild type mouse treated with OP9 supernatant during 24 hours is shown. The data was a summary from three independent experiments. Error bars represent standard standard error of the mean (SEM).

(b) The frequency of symmetric self-renewal, symmetric differentiation and asymmetric division of GFP+ precursors from wild type mouse seeded on irradiated OP9 cells during 24 hours is shown. The data was a summary from three independent experiments. Error bars represent standard standard error of the mean (SEM).
