

Figure S6: Neutrophil mobilization during *Nme* sepsis. A, B: Immunofluorescence microscopy images of spleen (A) and liver (B) of infected WT or *C5ar1*^{-/-} mice. Staining was done as described in Figure 4A. **C:** Neutrophil numbers in blood (expressed as percentage of white blood cells) as assessed by differential counting of bloodsmears from infected and non-infected WT versus *C5ar1*^{-/-} mice.
