

Snappers

Large demersal fish

Groupers

Large pelagic fish

Drums and croakers

Small demersal and reef fish

Elasmobranchs

Small pelagic fish

S8 Fig. Condition factor of fish represented as reserve:structural Nitrogen ratio. Reserve represents soft body tissue that can be reabsorbed (e.g. muscle, fat, gonads), structural represents hard tissues and structures (e.g., bone). High rN/sN indicates good body condition. Dotted line: no oil scenario, solid line: oiled [K1000 β 363]. Seasonal saw-toothed pattern (present in both scenarios) reflects gonadal tissue loss in spawning.
