

Recombinant frizzled1 protein attenuated cardiac hypertrophy after myocardial infarction via the canonical Wnt signaling pathway

SUPPLEMENTARY MATERIALS

Supplementary Figure 1: (A) Representative western blots and (B, C) the quantitative result of the expression of FZD1 in the mouse left ventricle before and one week after LAD ligation. *N* = 5 independent experiments in all groups. All data are expressed as mean ± S.E.M.

Supplementary Figure 2: (A) Representative western blots and (B, C) the quantitative result of the expression of FZD1 in the left ventricles of the MI mice before and after the treatment of RFP. $N = 5$ independent experiments in all groups. All data are expressed as mean \pm S.E.M.
