

TABLE S8. Minimum Inhibitory Concentration (mg/L) values of antibiotics for squatter colonies

Antibiotics	NCTC86_squatter1	NCTC86_squatter2	NCTC86_squatter3	ATCC4157_squatter1	ATCC4157_squatter2	ATCC4157_squatter3	Breakpoints*	HS(<=1%) ^f	VS(<=5%) ^f
benzylpenicillin	>32	>32	>32	12	8	12	NC ^g	-	-
amoxicillin	1.5	1.5	1.5	3	3	3	8	0.5	1
cefotaxim	0.016	0.016	0.008	0.023	0.032	0.032	1	0.008	0.016
imipenem	0.064	0.047	0.094	0.064	0.064	0.047	2	0.016	0.032
ertapenem	<0,002	<0,002	0.002	0.002	0.004	0.004	0.5	ND ^e	ND ^e
chloramphenicol	1.5	1	0.75	1	1	1	8	1	ND ^e
tetracyclin	0.125	0.5	0.19	0.5	0.19	0.25	8	0.25	0.5
colistin	0.016	0.016	0.016	0.016	<0,016	0.016	2	0.064	0.125
ciprofloxacin	<0,002	<0,002	<0,002	<0,002	<0,002	<0,002	0.25	0.002	0.004
gentamicin	0.19	0.19	0.25	0.25	0.125	0.25	2	0.125	ND ^e
cotrimoxazol	0.003	0.003	0.012	0.016	0.016	0.016	2	0.016	ND ^e

*Breakpoints are clinical breakpoints from the CASFM-EUCAST (V1.0 2017/03), or Epidemiological Cut-OFF (f) from EUCAST if clinical breakpoint unavailable

^fUsing the MIC distribution from EUCAST we defined hypersusceptible (HS) (green) and Very-susceptible (VS) (blue) cut-off as the lowest MIC encompassing 1 and 5% of the E. coli strains, respectively

^gNC : no cut-off (clinical or epidemiological) provided by EUCAST

^eND : not determined
