

Supp. Fig. S1. Pro-ANP processing activity of p.Tyr13Cys, p.Asp95Tyr, p.Leu334Trp and p.Arg525His was analyzed by Western blotting. WT corin and inactive R801A mutant were used as positive and negative controls, respectively. Pro-ANP to ANP conversion was quantified. Data were from 3 independent experiments. n.s.: not significant vs. WT.

Supplemental Table S1. Characteristics of participants in cohorts 1 and 2
