

Tumour-suppressive miR-539 inhibits tumour cell growth and migration by directly targeting EGFR in breast cancer

Authors: Jilong Guo, Guohua Gong, Bin Zhang

Supplementary figure 1. Analysis of EGFR expression in MDA-MB-231 and MCF7 cells by Western blot. (A) Introduction of miR-539 reduced the endogenous EGFR protein expression in MDA-MB-231 and MCF7 cells. (B) The levels of EGFR was markedly increased in both MDA-MB-231 and MCF7 cells after transfected with pcDNA3.1-EGFR plasmid.
