

Supplemental data table 10S: Number of identified phosphosites

The table compares the number of identified phosphosites between the wild type and the mutant $\Delta ptpB$, differentiated according to the respective phosphorylated amino acid.

amino acid	phosphosites in wild type samples only	phosphosites in wild type and $\Delta ptpB$ samples	phosphosites in $\Delta ptpB$ samples only
arginine	0	8	207
serine	17	77	49
threonine	11	47	25
tyrosine	3	10	5
