### Crystal structure determination

X-ray diffraction data for single crystal of compounds **6c**, **6e** and **6l** were collected using SuperNova (Rigaku - Oxford Diffraction) four circle diffractometer with a mirror monochromator and a microfocus MoK $\alpha$  radiation source ( $\lambda = 0.71073$  Å) for **6c** and **6e** and Cu MoK $\alpha$  radiation source ( $\lambda = 1.5418$  Å) for **6l**. Additionally, the diffractometer was equipped with a CryoJet HT cryostat system (Oxford Instruments) allowing low temperature experiments, performed at 130 (2) K and 129.95(10) K for **6l**. The obtained data was processed with CrysAlisPro software [S1]. The phase problem was solved by direct methods using SIR2004 [S2] or SUPERFLIP [S3]. Parameters of models were refined by full-matrix least-squares on  $F^2$  using SHELXL-2014/6 [S4]. Calculations were performed using WinGX integrated system (ver. 2014.1) [S5]. Figure was prepared with Mercury 3.7 software [S6].

All non-hydrogen atoms were refined anisotropically. All hydrogen atoms attached to carbon atoms were positioned with the idealised geometry and refined using the riding model with the isotropic displacement parameter  $U_{iso}[H] = 1.2$  (or 1.5 (methyl groups only))  $U_{eq}[C]$ . Crystal data and structures refinement results for presented crystal structure are shown in Table S1. The molecular geometry (asymmetric unit) observed in the crystal structures are shown in Figure S1.

Crystals of compound **6c** were poor quality. Among all tested crystals only one dataset allowed obtaining model of the structure. The refinement was complicated and resulted with poor refinement model. Obtained data indicated multi-component twinning. The twinning matrix was defined with TwinRotMat application of PLATON program [S7]. The obtained model confirmed the molecular structure, however with high refinement parameters R1 and wR2.

In the crystal structure of compound **6l**, a conformational disorder is observed for the solvent molecule present in an asymmetric unit. The two alternative conformations were modelled for O26 with 73% and 27% refined occupancies for components A and B, respectively.

Crystallographic data have been deposited with the Cambridge Crystallographic Data Centre as supplementary publication no.: **6c** (CCDC 1577989), **6e** (CCDC 1577990) and **6l** (CCDC 1577248). Copies of the data can be obtained, free of charge, on application to CCDC, 12 Union Road, Cambridge CB2 1EZ, UK, (fax: +44-(0)1223-336033 or e-mail: deposit@ccdc.cam.ac.uk).

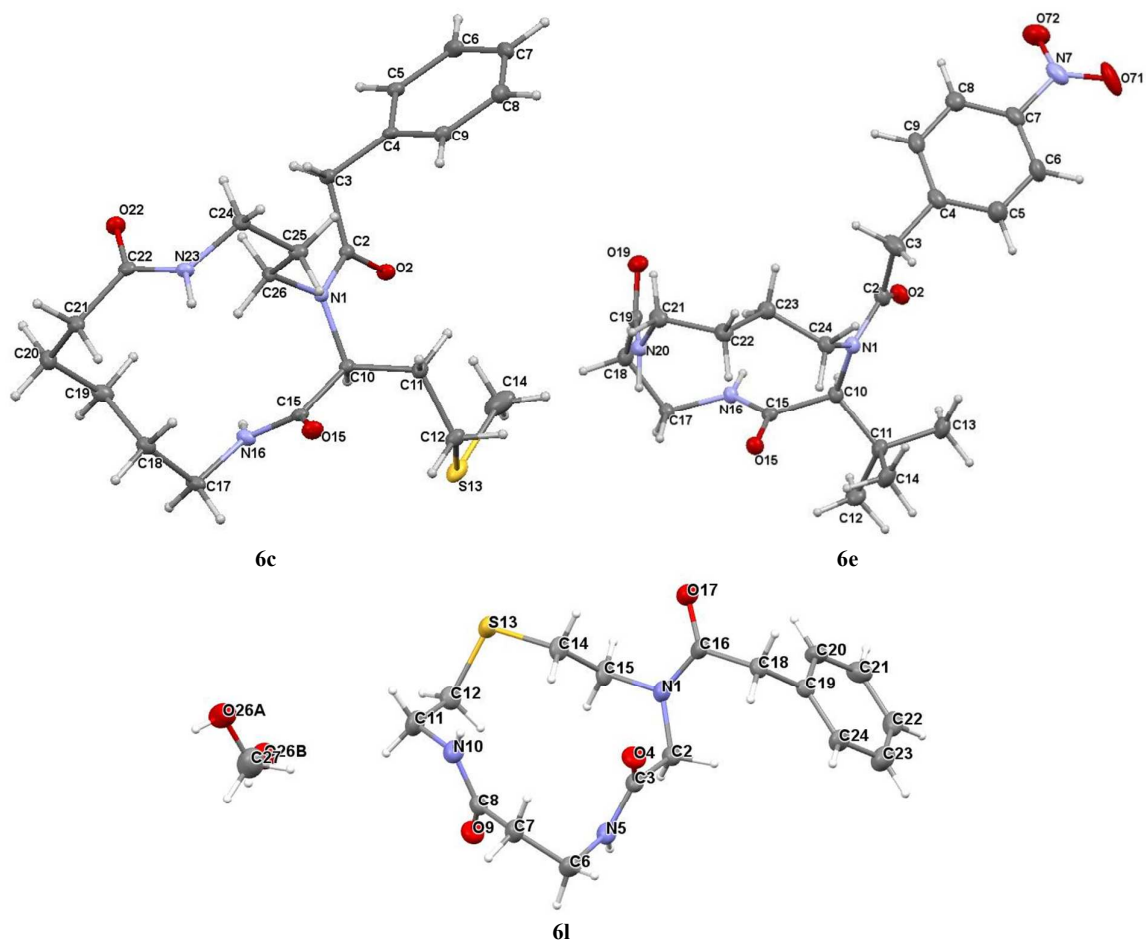

Figure S1. Molecular geometry observed in the crystal structures of compounds **6c**, **6e** and **6l**, showing the atom labelling scheme. This compound **6l** crystallise as a solvate in the ratio 1:1 (compound **6l**:methanol). The positional disorder on O26 in methanol molecule were observed and refined with site occupancy 73% and 27% for alternative conformers A and B, respectively. Displacement ellipsoids of non-hydrogen atoms are drawn at the 30% probability level. H atoms are presented as small spheres with an arbitrary radius

Table S1. Crystal data and structure refinement results for compound **6c**, **6e** and **6l**.

### Virtual library synthesis

The virtual library of macrocycles was created using ChemAxon's REACTOR software (<http://www.chemaxon.com>). 221 amino isocyanides, 272 oxo compounds and 205 carboxylic acids were used as reactants. Therefore, the theoretical chemical space of this virtual library is  $221 \times 272 \times 205 = 12.322.960$  (stereoisomers not included). To investigate such large chemical space, the program RandReactor was used to provide a smaller random sublibrary (N=1000) as smiles files.<sup>1</sup> The smiles files were then uploaded into StarDrop software for calculating molecular weight, logP, number of H bond donor and acceptor. This data was scored based on Lipinski rule of 5 already implemented in the Scoring Profiles of StarDrop. The data were visualized in scatter and radar plots in which the colors are formatted according to scoring function. Yellow and red color stand for high and low scores, respectively.
