PRISMA Checklist

Abstract

√ Structured Summary

Introduction

√ Rationale
  □ Objectives
    ◦ The objectives are not explicitly listed in a PICOS format as the study objective is not conducive that methodology due to the broader design

Methods

  □ Protocol and registration
    ◦ The novel protocol that was used in this study was developed as part of the study itself and therefore could not be registered in advance.
√ Eligibility criteria
√ Information sources
√ Search
√ Study selection
√ Data collection process
  □ Data items
    ◦ This study did not collect specific data items
    ◦ Instead, it collected the general subject of the article discussion

  □ Risk of bias in individual studies
    ◦ Given the nature of looking at the articles holistically, this study does not address this
    ◦ The key was to find the overall discussion topic in the literature rather than focus on individual articles

√ Summary measures
    ◦ Summary measures were consensus and inter-rater reliability (IRR) as discussed in the article

√ Synthesis of results
    ◦ Again, this was performed using consensus

  □ Risk of bias across studies
    ◦ Given that the study used consensus of overall subject discussion across multiple articles in the literature, the risk of bias is not explicitly address

  □ Additional analyses
    ◦ This was not done in the study as consensus and IRR was considered sufficient

Results

√ Study selection
√ Study characteristics
  □ Risk of bias within studies
    ◦ Not performed for the reasons discussed above

√ Results of individual studies
√ Synthesis of results
  □ Risk of bias across studies
    ◦ This was not performed for reasons discussed above

  □ Additional analysis
    ◦ This was not performed

Discussion

√ Summary of evidence
√ Limitations
√ Conclusions
